SUMMARY

Starting my career over 10 years ago in advertising development using ActionScript, HTML5, and CSS, I have switched my focus to Java development since 2021, including Spring Boot and JSF. I implemented a microservice for HL7 FHIR and contributed to the development of a product on JSF, optimizing interfaces and processes in retail. This involved enhancing loyalty systems and integrating applications, contributing to operational efficiency.

EXPERIENCE

Business Culture *Remote*
Fullstack Java Developer *July 2022 – Present*

Developing a loyalty system for retail using Agile and Kanban. My role includes performing current tasks, designing and implementing technical projects, supporting code and functionality, conducting code reviews, deploying at stages, and mentoring junior specialists.

Achievements:

- Developed a Spring Boot microservice for integration with HL7 FHIR server InterSystems IRIS, using RabbitMQ for reliable asynchronous message passing, improving medical data management and interaction with external systems. The project contributed to the company's international expansion in the medical services sector, ensuring compatibility with the HL7 FHIR standard.
- Developed a dynamic attributes system to improve customization and data exchange, integrating it into OLAP. This provided analytics and segmentation, attracting clients with needs in advanced analysis.
- Integrated the WYSIWYG editor Froala, enhancing template development and usability, expanding product capabilities to meet new client requirements.

Stack: Java, Spring Boot, JSF, IntelliJ IDEA, MySQL, Hibernate ORM, Maven, Git, Gitlab, RabbitMQ, JUnit, Mockito, Lombok, Log4J, Gson, Docker, WildFly, Wlyway, Postman, Swagger, PrimeFaces, JavaScript, HTML, CSS, Redmine

Plunger Dynamics *Remote*
Java Developer *September 2021 – July 2022*

Achievements:

- Created a REST API microservice using Spring Boot, MongoDB, Logback, Keycloak, and OAuth2. The project included developing endpoints, handling requests and responses, and ensuring security with Keycloak and OAuth2.
- Developed an application for displaying weather data using JSON, JavaFX, and Log4j. The project involved integrating with weather APIs to obtain current information.

SKILLS

Technical: Java, Spring Framework, Spring Boot, Spring Security, JSF, Maven, IntelliJ IDEA, Git, Gitlab, Hibernate ORM, MySQL, PostgreSQL, MongoDB, RabbitMQ, Log4J, SLF4J, Logback, Keycloak, OAuth2, Docker, HL7 FHIR, InterSystems IRIS, REST API, Design Patterns, SOLID, Microservices, JUnit, Mockito, Lombok, Postman, JavaScript, CSS, HTML

EDUCATION

Rostov Electrotechnical College
BSc in Computer Science
